

# Green Buildings

## For Government

Efficiencies and strategies for more environmentally friendly government buildings.

### Green Buildings for Government Examines:

- ☑ Green buildings as a key component of your sustainability strategy
- ☑ Energy, waste and water management
- ☑ Scorecards for essential and accurate measurement
- ☑ Effective recycling programs
- ☑ Strategies to promote staff and leadership buy-in
- ☑ Green building action plan
- ☑ Measure program goals and expectations

Green Government  
2009

### Webinar Program:

Thursday, June 11, 2009; 1pm EST  
*Scheduled for 90 minutes*

Altamont Group

# Green Government 2009

## LEED Certification

*Following LEED principals is a useful tool for green buildings even if certification is not the objective. Leadership in Energy and Environmental Design (LEED) is the industry standard for green building certification in the U.S. Developed by the U.S. Green Building Council (USGBC), LEED certification has become the hallmark of organizations looking to validate their green building initiatives. Besides the advantages of certification, LEED provides a framework for any building to become leaner and more environmentally friendly.*

**Green Buildings for Government**, The Recovery Act and current building trends have converged to create the ideal time for updating your building or office. With \$4.5 billion allocated to green construction, the opportunity is here to “go green”.

The opportunity for Government to lead has never been more important. This exercise in stewardship and innovation will have long reaching effects on the nation as a whole. Green initiatives have been loosely targeted and executed as means of improvement over the last couple years. However, the commitment to build and retrofit Government facilities into sustainable building is the necessary paradigm shift. Be an early adopter and realize the benefits of greener buildings.

**Green Buildings for Government** is a comprehensive, online webinar that outlines the development and implementation for greening your building or office. This course will introduce tools to cut waste, implement LEED criteria and maximize efficiency at your organization. Also, this program will discuss the process and future returns of starting now.

## Components of Green Building

**Energy Usage:** Reduces growing energy costs with the added benefit of reducing the organizational environmental footprint.

**Waste Reduction:** Efficient recycling programs save money through lower disposal costs, while minimizing the environmental impact of landfill disposal.

**Water Efficiency:** Water usage is a growing concern as the resource becomes more scarce. Furthermore, increased water costs are having a more significant bottom line impact than ever before.

**Materials Usage:** Using materials that are lower in toxicity will lower the associated health risks. The usage of post-consumer extends material life cycle.

**Indoor Air Quality:** Indoor air quality is a key component of employee health. Good air means a more efficient workforce.

## Registration

### Group Package

Take advantage of this great learning opportunity for your entire team. For a limited time, register 5 attendees at a group rate of:

**\$ 595**

ALTAMONT GROUP

### **About Altamont Group:**

*Altamont Group's purpose is to provide the best online trainings dedicated to sustainable business practices for private and government organizations. We work with expert industry leaders with proven track records of success in order to drive organizational change. Our trainings are the product of in-depth research in current trends and best practices.*

*Altamont Group is dedicated to answering the needs of today's companies and institutions. Please contact us with any training, consulting or recruitment requests.*

<b>Early Registration:</b>	<b>\$249</b>
Single Attendee:	\$ 299
Additional Attendee:	\$ 99
Course CD (with attendance):	\$ 149
Course CD (no attendance):	\$ 299
